Full Stack Developer and soon-to-graduate Software Engineer with experience designing SaaS products and web applications using modern technologies. I work across the entire development lifecycle, from functional analysis and architecture to implementation, documentation, and deployment.

PROFESSIONAL EXPERIENCE

Company	Location
KAIZEN INGENIERÍA SRL	Salta, Argentina
Software Engineer	August 2026 – Present
• Design and manage the infrastructure used to deploy internal automation and AI solutions, defining services, isolation, security, and operational standards. • Designed a decoupled architecture for running AI agents with independent environments, credentials, permissions, and data. • Develop a quotation agent that interprets requests, identifies requirements, and assists in drafting technical proposals. • Implement deterministic and auditable rules to calculate pricing, taxes, discounts, and margins while maintaining human oversight of commercial decisions.	
Company	Location
Kaizen Group	Salta, Argentina
Software Engineer Intern	April - July 2026
• Designed the technical architecture for a SaaS maintenance platform (EAM/CMMS) aimed at SMEs, using a modern monolithic stack with Next.js, Prisma ORM, and PostgreSQL under a multi-tenant model. • Led the strategic definition and scope of the Minimum Viable Product (MVP), aligning technical feasibility with business and financial objectives to achieve a shorter time-to-market. • Structured the system’s core functional modules, including hierarchical physical asset management, work order lifecycle management, inventory, and a strict Role-Based Access Control (RBAC) model. • Designed user adoption solutions, proposing a dynamic onboarding system using intelligent Excel parsers for bulk data imports and reduced customer friction. • Produced technical audits and management documentation, including Project Charters, mitigating scope creep risks and prioritizing high-impact administrative functionality over premature overengineering.	

Company	Location
Instituto de Innovación y Tecnología Aplicada	Salta, Argentina
Programming and Game Development Instructor	March – July 2026
- Designed and delivered Python training programs, guiding students from algorithmic logic fundamentals to the development of functional scripts and applications. - Led hands-on Unity and C# development classes, teaching key technical concepts including Object-Oriented Programming (OOP), physics systems, game mechanics, and optimization. - Mentored students in the planning and execution of their final capstone projects, including games and applications, promoting independent technical problem-solving and critical thinking. - Strengthened technical communication skills by translating software engineering concepts into accessible language for junior-level learners, further developing my technical leadership capabilities.	

EDUCATION

Institution	Degree / Position	Period
Universidad Católica de Salta	Computer Engineering	2022 – 2026
Universidad Católica de Salta	Teaching Assistant – Database I	2026
Universidad Tecnológica Nacional	Diploma in Full Stack Web Development	2024

SKILLS ADICIONALES

Idiomas: Español Nativo. Inglés: B1 - Cambridge Certificate. Japones y Chino principiante. Tecnologías: Frontend: React, Next.js, TypeScript, Tailwind CSS Backend: Node.js, NestJS, Python, API REST Datos: PostgreSQL, SQL, Prisma, Supabase Herramientas: Docker, Git, GitHub, n8n
